💡 The 30-Second Elevator Pitch: Why Switch to Galaxy?

Why did we build Galaxy Launcher? Traditional Minecraft launchers are either *sluggish, clunky, and bloated with ads*, or *dated and overly complex to configure*. Galaxy Launcher was built from the ground up to give players a **sleek, modern, glassmorphic cosmic interface** with instant mod installations, free custom capes & cosmetics, 1-click modpack sharing with friends, smart memory optimizations, and intelligent error troubleshooting—all in one lightning-fast application.

🌟 4 Pillars That Make Galaxy Launcher Stand Out

 **1. True 1-Click Discovery & Installation**

No more manually downloading .jar files, dragging folders, or hunting down compatible Fabric/Forge versions. Search millions of Mods, Modpacks, Shaders, and Resource Packs directly from Modrinth and install them instantly.

 **2. Revolutionary 1-Click Setup Sharing**

Want your friend to join your exact modded server or world? Click **Export Share Code**. Your friend simply pastes your 8-character code into Galaxy Launcher and gets the exact same mods, loader, and configs in seconds.

 **3. Dual-Authentication (Premium & Offline)**

Full support for official Microsoft/Mojang accounts with verified authentication, plus a flawless Offline/Cracked system that automatically fetches and applies your existing skins in real-time.

 **4. 3D Wardrobe & Custom Animated Capes**

Equip custom animated cosmic capes, halos, auras, wings, and hats in an interactive 3D character viewport. Rotate, zoom, and customize your avatar without paying monthly cosmetic subscriptions.
